75 %

Of energy requirements fulfilled through renewable energy sources in 2024/25

17 %

Increase in electricity supplied to the national grid through Recogen in 2024/25

Rs. 600 Mn

Invested in solar power generation in 2024/25

ENERGY MANAGEMENT

GRI 302-1

Consistent process innovations have enabled the Group to significantly reduce its reliance on non-renewable energy sources over the years. Approximately 75% of our energy requirements in 2024/25 were fulfilled through renewable energy sources comprising primarily exothermic energy generated from our production process. Recent investments in solar power generation has also contributed to reducing our grid-based electricity consumption. Aligning with our commitment to increasing our renewable electricity reliance to 50% by 2030, we invested an additional Rs. 600 Mn during the year under review to expand our solar power generation capacity. This contributed to a 4% of renewable electricity power consumption during the year under review.

2030 "Activate" Aspiration

50 %

Increase in renewable energy (Electricity) usage
